Dust control is actually part of the Spill Control Plan, not the H&S plan.

Sorry.

Kevin

Great Kevin, I will admit I have a lot of stuff and thought I had better make sure what I thought was correct.

Thanks

Kelly

Kelly,

Air monitoring during construction is an integral part of remedy implementation. The air monitoring plan will need to be submitted as part of the revision to the site wide health and safety plan.

In addition, if the tribe still wants to do it, they can set up an air monitor offsite to ensure that the tribe has data collected outside the FMC network. I have previously discussed Tribes' air monitoring with Penny Weymiller. The time to start thinking about this is when FMC submits the RD in March.

Kevin

Kevin, thought I would put a plug in for ambient air monitoring during the construction activities such as the re-grading the site to accommodate the proposed storm water runoff. I think that this is something that needs to be discussed prior to construction work.

Let me know what you think.

Thanks

Kelly

Kevin:

Please find attached the FMC OU RDRA Monthly Report #7 for December 2013 as required under Paragraph 55 of the FMC Plant OU RDRA Unilateral Administrative Order reporting on the status of implementation of the Remedial Design / Remedial Action work. This report covers the time period from December 1 to December 31, 2013.
